This is a draft position statement for discussion. This does not represent the views of the Committee and should not be cited.

μg Sb/kg bw/day	Micrograms of antimony per kilogram of body weight per day

APT Antimony Potassium Tartrate

ATSDR Agency for Toxic Substances and Disease Registry

bw Body Weight

Committee on Toxicity of Chemicals in Food, Consumer Products and COT the Environment DWI **Drinking Water Inspectorate** Ethoxyresorufin-O-deethylase **EROD** EU **European Union GST** Glutathione-S-transferase **HBGV** Health-based guidance value Lowest Observed Adverse Effect Level - the lowest dose in a study at LOAEL which adverse effect(s) are observed. Milligram mg Microgram μg Minimal Risk Level - an estimate of the daily human exposure to a substance that is likely to be without appreciable risk of adverse non-MRL cancer health effects over a specified duration of exposure No Observed Adverse Effect Level - the highest administered dose at NOAEL which no adverse effect has been observed. NTP National Toxicology Program POD Point of Departure

Parts per million

ppm

Sb Antimony

Tolerable Daily Intake - an estimate of the amount of a contaminant,

TDI expressed on a body weight basis (e.g., mg/kg body weight) that can
be ingested over a lifetime without appreciable health risk.

UF Uncertainty factor

UKHSA United Kingdom Health Security Agency

WHO World Health Organization
