Adverse reactions to food and food ingredients (2000)

This report by the COT considers adverse reactions to food both of immune origin (food allergy) and non-immune origin (food intolerance).

[External link to the national archive for the 2000 report on adverse reactions to food and food ingredients](#)

COT report on organophosphates (1999)

This report, drafted by the Working Group on Organophosphates, considers whether single, prolonged or repeated exposure to low doses of organophosphate compounds (OPs) can cause long-term adverse health effects.

COT report on peanut allergy (1998)

Peanut allergic individuals can undergo a severe, life-threatening reaction following exposure to peanut allergens. A Working Group of the COT was

established to advise whether there is an association between early exposure to peanuts and peanut products and the incidence of peanut allergy in later life.
