Human Studies

Author/Date	Study type	Study size/No. of Patients at End	Exposure (ginger dose/day)	Study period	Length of Treatment (days)	Main outcome measures	Main results
-------------	------------	-----------------------------------	----------------------------	--------------	----------------------------	-----------------------	--------------

Chittumma <i>et al.</i> , 2007	Randomized double-blind controlled trial.	126/123	Ginger powder capsules (325 mg x2, 3x/d, = 1950 mg/day)	4 days	4	Change in nausea and vomiting scores (3 symptoms on Rhodes index); occurrence of side-effects	Results showed ginger significantly more effective relieving than vit B6 (p <
Ensiyeh <i>et al.</i> , 2005	Double-blind randomised controlled trial.	70/69	Ginger powder capsules (500 mg 2x/d =1000 mg/day)	3 months	4	Severity of nausea (VAS 0-10); number of vomiting episodes; general response to treatment (5-item Likert scale); occurrence of side-effects or adverse pregnancy outcome	two spontaneous abortions ginger 1 in B6 no congenital anomalies observed babies to term

Fischer-Rasmussen <i>et al.</i> , 1991	Double-blind randomised crossover trial	30/27	Ginger powder capsules (250 mg 4 times per day = 1000 mg/day)	11 days	4	Preference of treatment period; relief scores (4-point scoring system); outcome of pregnancy	One spontaneous abortion elected; adverse effects observed; remain subjects
--	---	-------	---	---------	---	--	---

Portnoi, 2003	Not specified	187 pregnant women	Various, not specified	up to 12 months post birth	Minimum of 3 days	Safety and effectiveness of ginger for nausea and vomiting of pregnancy (NVP).	<p>Three major malformations were reported in the control group, ventricular septal defect (VSD), lung abnormality, and kidney abnormality (pelvic).</p> <p>One incident of idiopathic central precocious puberty at age 2 years. No significant differences between the two groups in terms of births, spontaneous abortions, stillbirths, therapeutic abortions, birth weight, or gestational age.</p>
---------------	---------------	--------------------	------------------------	----------------------------	-------------------	--	--

Smith, 2004	Randomized, controlled equivalence trial	291 women, less than 16 weeks pregnant	1.05 g ginger	3 weeks	3 weeks	Ginger versus B6 for the treatment of nausea or vomiting in pregnancy	Three spontaneous abortions in ginger group; 9 abortions in B6 group
Vutyavanich, 2001	Double blind	32	Ginger powder capsules (250 mg 4x/day =1000 mg/day)	5 months	4	Severity of nausea (VAS 0-10); number of vomiting episodes; general response to treatment after 1 week (5-item Likert scale); occurrence of side-effects and adverse pregnancy outcomes	Ginger significantly more effective than the placebo in relieving severity of nausea; p = 0.014

Willetts <i>et al.</i> , 2003	Double-blind randomised placebo-controlled trial	120/99	Ginger extract capsules (125 mg 4x/d =1000 mg/day)	8 months ⁴	Used RINVR to measure frequency, duration, distress caused by nausea, vomiting and retching; long term follow-up for birth outcome	Three spontaneous abortions observed; ginger
-------------------------------	--	--------	--	-----------------------	--	--

Human studies - Platelet Aggregation

Author/date	Study design	Population/study size	Study Duration	Exposure	Outcome
Bordia <i>et al.</i> , 1997	Placebo controlled trial	Patients with confirmed myocardial infarction N = 60	3 months. Outcomes measured at: baseline, 1.5 months and 3 months.	Dose: 4g per day Unstandardised capsules	Platelet aggregation- Agonist(s): A Epi;
Bordia <i>et al.</i> , 1997	No data.	No data.	No data.	No data.	Fibrinogen;
Bordia <i>et al.</i> , 1997	No data.	No data.	No data.	No data.	Fibrinolytic a

Bordia <i>et al.</i> , 1997	No data.	20	1 day. Outcomes measured at: baseline, 4 hours post- consumption	10 g single dose. Unstandardised capsules	Platelet aggr - Agonist(s): Epi
Jiang <i>et al.</i> , 2004	Randomized, open label, three-way crossover trial	Healthy male volunteers Age: 20-36 N =12	Total study period: 3x13 days, 14 days washout period between each study period.	Dose: 3.6g (3x 0.4g, 3x per day) Unstandardized capsules Consumed with 25 mg dose of rac-warfarin, consumed once per study period.	Platelet aggr Agonist: AA; Plasma warfa enantiomer p binding & wa enantiomer concentration Urinary S- 7-hydroxywa
Lumb. 1994	Randomised, double- blinded placebo- controlled crossover trial	Healthy male volunteers N=8	Total study period: 2 x 1 day, at least 14 days washout period. Outcomes measured immediately before, 3 hrs, and 24 hrs post consumption of ginger	Dose: 2g (4 x 500 mg) dried ginger per day Unstandardized capsules	Platelet aggr - Agonist(s): collagen, rist ADP; Bleedin Platelet coun Thromboelas

Rubin <i>et al.</i> , 2019	Case report	Female, 70 yrs	No data.	48 mg daily Chewable ginger supplement for approx. 1 month	INR - 8.0 approx month after t ginger suppl
-------------------------------	-------------	----------------	----------	---	---

Srivastava 1989	Open-label single-arm trial	Healthy female volunteers, N = 7	Total study period: 7 days. Outcomes measured at baseline and 7 days post- consumption	Dose: 5g raw ginger per day	Platelet throm B2 productio
--------------------	-----------------------------------	-------------------------------------	--	-----------------------------------	--------------------------------

Verma <i>et al.</i> , 1993	Randomised placebo controlled trial	Healthy male volunteers; N = 20	Total study period: 14 days, high calorie diet for first 7 days, high- calorie diet and ginger/placebo consumed for next 7 days. Outcomes measured at baseline, 7, and 14 days	Dose: 5g (4 x 625 mg, twice per day); dry ginger powder - Unstandardized capsules Consumed with 100g (2x50g) butter, 2 cups of milk, 8 slices of bread.	Platelet aggr Agonist(s): A Epi
-------------------------------	--	---------------------------------------	---	--	---------------------------------------

Young <i>et al.</i> , 2006	Not specified	20	72 days	1 g ginger (+ 10 mg nifedipine)	Synergistic e ginger and n on anti-plate aggregation normal huma volunteers an hypertensive patients.
-------------------------------	------------------	----	---------	---------------------------------------	--

Effect on CYPs and prostaglandin activity

Author	Test System	Exposure	Characterisation of test substance	Main outcome measure	Outcome
Dugasani <i>et al.</i> , 2010	Mouse leukaemic monocyte (RAW 264.7) macrophages and human polymorphonuclear neutrophils (PMN)	1, 3 and 6 μ M	[6]-gingerol, [8]-gingerol, [10]-gingerol and [6]-shogaol	Compare the antioxidant and antiinflammatory activities of gingerols and their natural analogues to determine their structure-activity relationship and molecular mechanisms.	Dose dependant inhibition of activated PGE2 release. Inhibition reached 56, 66, 73 and 87%, respectively at 6 μ M

Jolad et al., 2004	HL-60 cells	Not specified	Ginger constituents: gingerols, shogaols, 3-dihydroshogaols, gingerdiols	Effects of ginger components on LPS-induced PGE2 production	No cytotoxicity demonstrated
Jolad et al., 2005	HL-60 cells	Not specified	Ginger constituents containing gingerols, shogaols, 3-dihydroshogaols, gingerdiols	Effects of ginger components on LPS-induced PGE2 production	Inhibition of LPS-stimulated PGE2 production (IC50 = 0.008 ug/ml with Ginger fractions)
Kim et al., 2012	Human liver microsomes	0.05–5 ug/ml	Aqueous ethanolic ginger extract (30% EtOH)	Inhibitory effect on CYP450-mediated drug metabolism	Concentration dependent inhibitory effects on CYP2C19; IC50 value 3.8 g/ml
Kimura et al., 2010	Human CYP3A4 and CYP2C9 microsomes	Not specified		Inhibitory effect on CYP3A4 and CYP2C9 activity	significant inhibition of CYP3A4 IC50 5.1u g/ml CYP2C9 IC50 (10ug/ml) activity

Lantz et al., 2007	U937 cells	0.1 ug/ml for 6 hrs	Ginger extract and mixtures of 6-, 8- 10-gingerols and 6-, 8-, 10-shogaols	Effect on inflammatory mediator production	No effect on COX-2 expression
--------------------	------------	---------------------	--	--	-------------------------------
