# Questions put forward for the discussion sessions- 2021

## In this guide

#### In this guide

- 1. COT FSA PBPK for Regulators Workshop Report 2021 Cover page
- 2. Summary COT FSA PBPK for Regulators Workshop Report 2021
- 3. Background COT FSA PBPK for Regulators Workshop Report 2021
- 4. UK Food Standards Agency (FSA) requirement for PBPK modelling 2021
- 5. Objectives and outline of the workshop 2021
- 6. Questions put forward for the discussion sessions 2021
- 7. Presentations and Panel discussions 2021 Workshop report
- 8. Overarching conclusions 2021 Workshop Report
- 9. Technical Terms 2021 Workshop Report
- 10. Abbreviations 2021 Workshop Report
- 11. References 2021 Workshop Report
- 12. Organizing Committee, Committee Members and COT Secretariat 2021
  Workshop Report
- 22. The below were the questions put forward for the discussion sessions.

#### Limitations / Ensuring fitness for purpose

- What are (if there are any), the limitations of using PBPK modelling in an agrochemical/pharmacological setting?
- Can PBPK models fully replace animal testing, or are there some cases where animal studies may still be required?
- Are there any circumstances where we can use simpler in silico compartmental models versus PBPK?

### **Potential applications**

- Can PBPK models be used to provide relevant substances to benchmark against known human biomonitoring data?
- Exploration into intracellular dosing.
- Could PBPK modelling be used to convert estimates of external exposure into an estimate of internal exposure at the site where toxicity occurs to refine estimates of risk?
- PBPK modelling provides a way to incorporate kinetics into consideration in animal-free, in vitro based safety/risk assessment and to relative in vitro toxicity assay findings to human safe exposure estimates.
- Can PBPK models lower the reliance on default uncertainty factors, and would it reduce this uncertainty?

#### Validation for regulatory application

- Are there any harmonised guidelines available for regulators?
- Have there been any cases where there has been a human PBPK model developed without human data? If so, how was the model validated (if at all)?
- What are some of the hurdles to PBPK modelling being used more widely by scientists, and accepted by regulators?

### **Duties as regulators**

- What aspects of the model do regulators have to check before it can be used in risk assessment?
- Are regulators expected to use PBPK models (for example, to double-check calculations, to examine the source code) or can regulators just take simulation results at face value?
- How could PBPK modelling be used more extensively in food safety assessment?
- Is the integration of PBPK models into current human health assessment methodologies a risk worth embracing?
